

Moonshiner is looking for

Lead Java Developer (f/m)

About us:

Moonshiner is a software architecture and programming agency that enables organizational change through technological innovation. We are an award-winning Austrian company fascinated by all things digital, altering how enterprises organize their IT through a hands-on mentality and a continued focus on results.

We are looking for a **Lead Java Developer** with a creative mind and an appreciation for the amazing possibilities technology has to offer.

About the job:

You're a Java developer with at least 3 years of experience and want to further your career while continually creating innovative solutions? You love the challenge of improving the technological architecture for a wide variety of clients? Then this is the ideal opportunity for you! As a Lead Java Developer at Moonshiner you will - together with an amazing team - develop digital platforms of the future and influence the way we shape the Java world.

Your responsibilities:

- Ability to work independently as well as in dynamic, multinational teams as part of our fast-paced agile processes
- Build up a new technical team with options towards the leadership or expert track
- Decide how a modern Java Stack is structured and maintained.
- Development of solutions according to the needs of our clients, including detailed concepts for development and implementation
- Overcoming hurdles on the way to successful implementation: solving complex problems, meeting deadlines and quality expectations, setup and maintenance of test environments and unit tests,
- Close collaborations with other teams in Moonshiner and maintenance of source control environments, ensuring code integrity of all developers
- Creation of user stories and criteria for acceptance
- Introduction of development guidelines and organization of backlog management
- Analysis, design and implementation of business requirements using Hybris technologies.

Your qualifications:

- 3 years as a Java developer
- Understanding of web technologies based on HTML, Javascript Frameworks, Spring Framework (Core and MVC) and Web Services (including SOA), and knowledge in data processing (SQL, XML)

- Interest in micro service architecture approaches and when to use them
- Understanding of the importance of testing and an affinity for test-driven development
- Experience documenting code and working with code versioning and control systems (GIT), as well as participation in peer code and design reviews
- Commerce experience (Elastic Path, Hybris, ATG, Magento, Intershop) is a plus
- Experience with agile methods and Scrum methodology, product information management systems, and Altassian Tools (Jira & Confluence) are additional advantages

What you can expect from us:

- Starting salary of EUR 50.000,00 with the possibility of overpayment depending on experience.
- A hackathon-approved and award-winning development team working with latest tech stack in a collaborative atmosphere with a focus on creative freedom
- An office in the heart of Vienna which offers comfortable collaboration spaces with couches, Playstation, snacks, beverages, and the possibility of having your furry friend join you at the office
- Weekly get-togethers for lunch, monthly after-work celebrations and additional team events
- A flat organizational hierarchy and the possibility of working remotely in our Barcelona, Mumbai or Munich offices
- We grant flexibility to students wishing to add practical experience to their studies

Ready to become part of the team?
We can't wait to hear from you!
